Children's Engineering

A Teacher Resource Guide for Design, Engineering, and Technology in Grades K-5

Instructional resources for the study of design, engineering, and technology concepts that reinforce Virginia's Standards of Learning

Foreword

Children's Engineering: A Teacher Resource Guide for Design, Engineering, and Technology in Grades K-5, Second Edition, identifies engineering design and technology-based experiences that enhance the content of selected Standards of Learning in English, mathematics, science, and history and social science. The experiences enable teachers to introduce children in grades K-5 to the technological world around them, and to develop confidence in their ability to "engineer" solutions. The document is designed to be a companion to the Standards of Learning in place at the time of its publication, and a resource for enhancing locally developed curriculum.

Each experience is intended to reinforce specific Standards of Learning. Additionally, these experiences have been correlated to the *Standards for Technological Literacy: Content for the Study of Technology*. The experiences promote critical thinking and problem-solving abilities, and they build upon a child's capability to retain content described in the Standards of Learning.

The resource guide is arranged by grade level. Each grade level contains at least two experiences per subject area. The supporting resources in each experience consist of a design brief, a teacher resource page, a guided portfolio, and an assessment rubric. This document provides teachers with the instructional materials they need to implement each experience. The majority of the supplies and materials that are needed to implement the experiences are readily available in most elementary classrooms.

The instructional pages are child-friendly and ready to copy. Targeted and supporting Standards of Learning are specified on all materials to illustrate the academic strength inherent in K-5 technology and engineering education experiences. The document has been carefully written to ensure the experiences are age appropriate. Each experience has been crafted to build increasingly sophisticated concepts, knowledge, and ability as children mature. We hope you will enjoy using this document and that it will be a worthwhile experience for all children in grades K-5.

George R. Willcox, Coordinator, Governor's STEM Academies, Virginia Department of Education

Lynn Basham, Ph.D., Specialist, Technology Education and Related Clusters, Virginia Department of Education

Preparing Children for a Technological World

In today's technological world, every human activity is dependent upon various tools, machines, and systems, from growing food and providing shelter to communication, healthcare, and entertainment. Some machines, like the tractor, make more efficient the activities that humans have done for hundreds or thousands of years. Others, such as airplanes, automobiles, satellites or computers, make possible things that humans have never been able to do before. This collection of devices, capabilities, and the knowledge that accompanies them is called technology.

Broadly speaking, technology is how people modify the natural world to suit their own purposes. From the Greek word *techne*, meaning art or artifice or craft, technology literally means the act of making or crafting, but more generally it refers to the knowledge and processes that people use to extend human abilities and to satisfy human needs and wants.

Children's Engineering: A Teacher Resource Guide for Design, Engineering, and Technology in Grades K-5, Second Edition, combines selected core content in the most recent Standards of Learning, and technology and engineering design experiences to assist children in developing their ability to use, create, control, and assess technology. With the growing importance of technology to our society, it is vital that every child receive an education that emphasizes their technological capability.

Quick Hints for Getting Started

Listed below are some quick hints that might help classroom teachers implement the activity packages:

- Read the design brief *before* reading the teacher resource page. It will help in your understanding of the activity.
- Materials should be limited to the items on the design brief. Teachers may make substitutions or eliminate items that are unavailable. Students may *not* make any substitutions or use more material than specified.
- Challenges can be completed in more than one way. Students are encouraged to use the allowed materials in varied and unusual ways. There is no simple correct answer.
- Collaboration among group members is stressed.
- Organize the materials for groups by placing them in bags, in boxes, or on trays. This speeds up transition time between lessons and improves time on task.
- Oral presentations are to be presented by groups after a project has been completed. This can be done as an English lesson even if the activity's target is math, science, or history. Rubrics for oral communication skills are included for grades 2 through 5.
- Reading comprehension is an important aspect of each activity in the upper grades. Encourage each group of students to read through the design brief, guided portfolio, and the project rubric if they have trouble understanding the challenge. Teamwork is encouraged.
- Challenges contain supporting Standards of Learning from various areas of the curriculum. This provides the opportunity for the classroom teacher to integrate the project sessions into several curriculum areas. Lesson planning strategy should be guided by the target and supporting Standards of Learning of each activity.
