

Create a Critter

As a team, you will use the supplies provided to design and create a critter that will be able to survive in an ecosystem of your choice. Your critter will be an original animal that has never been discovered before. Fill in the table below to identify characteristics about your critter. Once filled in, draw a picture of your critter on the back of this paper.

Create a 3-D model of your critter using the materials supplied. Your team will present your critter to the class. Create a food web containing your critter and its predators and prey. Use the attached rubric to guide your creation.

Name of Critter	
Ecosystem	
What does it eat?	
How does it obtain its food?	
What are your critter's predators?	
How does it defend itself?	
List structural adaptations	
List behavioral adaptations	
What are its instincts and learned behaviors?	
What is its shelter	
How does it raise its young?
