General Guidelines for Administering Medication in School

Overview

Administering prescriptive and over-the-counter medication during school hours is a complex issue. In order for many students with chronic illnesses or disabilities to remain in school, they must receive medication. However, administering medication in school has the potential for many problems, such as storage problems, who will administer the medication, potential undesirable side effects, and emergency situations which may arise as a result of the medication. Medication must be administered under the safest possible conditions. Therefore, these guidelines are offered to assist school divisions in developing a policy for administering medication to students at school. The following guidelines were developed to provide guidance for administering medication to students who have specialized health care needs.

Prior to Administering Medication

Prior to administering any prescriptive medication the following three items should be addressed:

♦ Authorization for medication.
♦ Labeling for the medication.
♦ Parental consent.

Note: Policies for over-the-counter medications vary greatly from one school division to another. Refer to local school division policies for policies for over-the-counter medications.

Medication Authorization. The use of all prescriptive medications should be authorized in writing by a licensed prescriber, which includes physicians, dentists, physician assistants, or licensed nurse practitioners. The written authorization should include the following information:

♦ Student’s name.
Licensed prescriber’s name, telephone number, and signature.

Date prescription written.

Name of the medication.

Dosage.

Time of day to be given.

Anticipated length of treatment.

Diagnosis or reason the medication is needed (unless reason should remain confidential).

Serious reactions that the student might experience.

Any serious reactions that may occur if the medication is not administered.

Special handling instructions.

(See example of a medication authorization/parental consent form at the end of this section.)

Any changes in the original medication authorization require a new written authorization and a corresponding change in the prescription label. Faxed authorizations may be acceptable as long as there is a signed parental consent for the medications authorized by fax. Changes in medications via the telephone should be taken only under extreme or urgent circumstances. Telephone changes should be taken directly from the licensed prescriber by a licensed nurse only if this is consistent with the local school division policy. The telephone authorization for changes in medications should be recorded on the student’s record and be a one-time-order only. A telephone authorization should be followed by a written order from the licensed prescriber within 24 hours.

Medication authorizations should be received on a standardized authorization form. However, authorizations on stationary or prescription pads from the licensed prescriber or an acceptable label on the prescription container (see medication labeling below) are acceptable if the parents/legal guardian sign and date the form/label.

**Parental Consent.** In addition to the authorization for administering medication, parental consent must be obtained before a medication is given to a student. For each medication, the parental consent should include the following information:

- Student’s name.
- Parent’s name.
- Parent’s emergency/daytime phone number.
♦ Statement of parental consent.

♦ Date of consent.

♦ Allergies.

♦ Name of the medication (if not on medication authorization form).

♦ Reason for the medication (if not on medication authorization form).

♦ Duration of treatment (if not on medication authorization form).

If a medication is administered over a long period, a renewed consent form should be obtained every six months, or if it is a standing order, parental consent should be renewed yearly. (See example of a medication authorization/parental consent form at the end of this section.)

**Medication Labeling.** The final area that should be addressed prior to administering medication is labeling. The medication must be in its original container before it is given to a student. The pharmacist can divide the medication into two containers—one for home and one for school. The original container should be labeled with the student’s name, name of medication, directions for dosage, frequency to be administered, the licensed prescriber’s name, and the date the prescription was filled. **Medications in plastic bags or other non-original containers are not acceptable.**

**Administering Medication**

**School Staff.** In schools where school nurses are available on a daily basis, it is recommended that school nurses assume responsibility for arranging the administration of medication to students. In schools where school nurses are not available on a daily basis, it is recommended that the principal assume responsibility for arranging the administration of the medication. If an aide is assigned to administer the medication, the medication authorization, parental consent, and medication label should be reviewed by the school nurse, principal, or principal’s designee prior to giving the first dose. [Note: First dose of a new medication should be given at home.]

It is recommended that the principal or school nurse ensure that:

♦ Medication is given correctly and documented appropriately.

♦ The appropriate forms are completed prior to giving a medication to include authorization and parental consent. (See sample form at end of this section.)

♦ The medication is properly labeled and stored properly in a secure, safe place.
**Documentation of Administering Medication.** When medication is brought to school, the amount of medication in the container should be noted (e.g., the number of capsules or the volume of liquid). Each time a medication is administered a record should be kept of who administered it (initials may be used as long as a complete signature that corresponds with the person’s initials is noted on the record), to whom it was given, the name of the medication, the time it was given, the dose given, the manner in which it was delivered (e.g., by mouth, in ear), the effect of the medication, and any side effects or reactions. Any changes in the type or dosage of the medication or the time it is to be given, should be accompanied by a new medication authorization/parent consent form, and a newly labeled medication container from the pharmacy. The school nurse or principal should establish the date when written medication renewals will be required.

**Storage of Medications.** A two-week supply or less of medications (unless medication is taken on a daily basis throughout the school year) should be kept in an appropriately labeled container which is locked and secured in a designated space (e.g., a locked box stored within a locked cabinet). Access to keys for the storage space in which medication is kept should be limited to the school nurse, the principal, and authorized staff. A listing of authorized staff should be maintained by the principal and updated routinely. Keys to the medication storage area should never leave the school grounds. Arrangements need to be made for medications requiring refrigeration. The school nurse or principal should establish a date when any unused medication should be picked up by parents.

**Parents/Guardian.** Prior to administering a medication at school the parents should:

1. Provide the school with a written authorization from the licensed prescriber that includes the following information: the student’s name, name of the medication, dosage, hours to be given, method by which it is to be given, name of the licensed prescriber, date of the prescription, expected duration of administration of the medication, and most importantly, possible toxic effects and side effects. For any changes in medication, the parents must provide a written authorization signed by the licensed prescriber.

2. Provide the medication in a container labeled as required.

3. Provide a completed parental consent form.

4. Administer the first dose of any new medication, unless the medication is an “in school” medication only.

5. Transport medication to the school so that the student is not responsible for bringing the medication to school.

(See example of a medication authorization/parental consent form at the end of this section.)

Unused medication should be picked up by parents within one week of the expiration date. After one week the medication should be destroyed by the school nurse, principal,
or the principal’s designee. Medication given on a daily basis throughout the year should 
be destroyed two weeks after the last day of school. It is advisable that the destruction of 
the medication be witnessed by another person. [Note: School divisions should establish 
their own policy regarding disposal of medications based on available staff after the last 
day of school.]

**Self-Administration of Medications**

Many school divisions do not allow self-administration of medication except under 
special circumstances with a physician’s order and under the supervision of the school 
nurse, principal or the principal’s designee. School divisions that allow self- 
administration of medication should consider the following questions when developing a 
policy for self-administration of medication:

♦ Has the student demonstrated his/her capability for self-administration and an 
understanding that medication is not to be shared?

♦ Is there a need for a medication order stating that the student is qualified and/or able to 
self-administer the medication?

♦ Is there a need for parental consent for self-administration?

♦ What medication will the student be allowed to carry and administer?

♦ Does the medication require refrigeration or security?

♦ Is there a need for notification of appropriate team members (such as teachers, principals, 
support persons) of all self-testing or self-administration of medication?

♦ Is there a need for staff to be appropriately prepared for working with the student?

♦ Should there be recognition that self-administration of medication is a privilege which 
can be taken away if medication policies are abused or ignored?

Some school divisions that allow self-administration of medication use a “medication 
pass” system. Each student who is allowed to self-administer medication receives a pass 
that states the student’s name, the name of the medication that the student can self- 
administer, date issued, who issued the pass, when the pass expires (e.g., seven days, end 
of school year), when it is to be taken (as needed, on a schedule), and any monitoring that 
is required. The student should carry the pass at all times.

It should be noted that the guidelines listed previously for prescription and over-the-
counter medication should be followed with medication that is self-administered.
**Field Trips**

At least one day prior to a field trip, the person who administers the medication should be made aware of the event so that arrangements can be made to meet the student’s needs for medication. Medication given on field trips should be administered according to the guidelines for administering medications, which include administering the medication from the original medication container.

[Note: Since the publication of “Medication Administration” in *Guidelines for Specialized Health Care Procedures*, the following clarification of the term “administer” medication was set forth in the guidance document adopted by the Board of Pharmacy on June 11, 1998 and the Board of Nursing on concurred July 21, 1998:

*If the advance preparation is to assist in the administration of medications to students during a single-day field trip, such advance preparation shall not be made prior to the last working day before the day of the field trip and shall not exceed a one-day supply. Any packaging used in such advance preparation shall include the student’s name and any other appropriate student identifier; physician’s name; drug name and strength, and quantity; and appropriate directions for administration. For any field trip which is longer than one day in length, a student’s prescription should be provided by the student’s parent or guardian in a properly labeled prescription vial which has been dispensed from a pharmacy and, for oral medications, which contains only the quantity needed for the duration of the field trip.*]

**Emergency Medications**

Written policies should be available for any emergency medication that is given to students. The epinephrine protocol included at the end of this section is another example of a policy that may be needed.
Epinephrine Protocol \(^{91}\)
(To be used in conjunction with a physician’s order in an EMERGENCY situation.)

Use of subcutaneous epinephrine should be considered in the following situation:

**Asthma with any of the following:**

1. Breathing rate of less than 12 or greater than 36 times a minute.
2. An anxious student or a student with decreased consciousness.
3. Shortness of breath or inability to speak more than a 3 to 5 word sentence.
4. Difficulty breathing (significant use of accessory muscles for breathing or poor air movement).
5. Cyanosis or significant pallor.

**Allergic reaction with any of the following:**

1. Heart rate greater than 120 times a minute, systolic blood pressure less than 80.
2. Breathing rate less than 12 or greater than 36 times a minute.
3. Significant wheezing or poor air movement.
4. Overwhelming generalized urticaria (hives) or sudden onset of swelling.
5. An anxious student or a student with decreased consciousness.
6. Drooling, hoarse voice, and/or inability to swallow.

**Bee sting in a student with a history of bee sting allergy for whom an epipen has been authorized.**

- **Dosage of Epinephrine:** Two dosages of epinephrine are available—0.3 ml and 0.15 ml of 1:1000 epinephrine (i.e., single dose of epipen). Epinephrine should be administered in the prescribed dosage subcutaneously as directed on epipen directions.

- **In All Situations Except Category 3 (bee sting):** Before administering the epipen, the student’s primary health care provider should be contacted or if the primary health care provider can’t be reached then a hospital emergency room physician should be contacted.

At the same time as contact with the primary health care provider is attempted, assisting personnel should activate the 911 system for transportation of the student to the hospital emergency room. [Parents should be notified also.]

---

\(^{91}\) Policy adapted from protocol developed by Susan Werner, Chairperson Culpeper County School Health Advisory Committee.
Authorization/Parental Consent for Administering Medication

On the following page is an example of an authorization/parental consent form for administering medications to a student. This form can be reproduced and used or can be modified as needed for local school division use.

[Note. Before adapting any of the sample forms, please refer to local school board policies and regulations regarding medications and the code of conduct.]
Authorization/Parental Consent for Administering Medication
(Use a separate authorization form for each medication.)

STUDENT’S LAST NAME __________________ , FIRST NAME _____________, M.I. ___
STUDENT NUMBER __________________ GRADE ____  DATE OF BIRTH _____/______/______
Allergies ________________________________________________________________

Parental Consent
I am the parent or guardian of _______________________________. I give my permission for him/her to take
the following prescribed medication while in ________________________ School. I hereby acknowledge that I
have read and understood the School Board Regulations relating to the taking of medications. I hereby release
______________________________ School and its employees from any claims or liability connected with its
reliance on this permission and agree to indemnify, defend and hold them harmless from any claim or liability
connected with such reliance. I authorize a representative of the school to share information regarding this
medication with the above licensed prescriber.

## Procedure for Administering Medication

### General Procedure

1. Wash hands.

2. Assemble:
   - equipment
   - medication
   - container for administering (if applicable)

3. Review the medication authorization, medication label, and parental consent for administering medication.

4. Review Health Care Plan for documentation of any student-specific techniques that are recommended for administering the medication.

5. Remove medication from storage area. Compare label on medication container with medication authorization. Ensure that the dosage, time given, student’s name, and licensed prescriber’s name on the medication label is identical to the medication authorization. Read the label 3 times before administering the medication.

6. Prepare medication. An accurate means for measuring the medication should be readily available. Liquid medication may be poured into a cup with marked measurements, a medicine spoon with marked measurements, or pulled up into a syringe. A tablet or capsule may be placed in a cup.

7. Place remaining medication back into the designated storage area.

8. Explain the procedure to the student at his/her level of understanding. Encourage the student to participate as much as possible.

### Points to Remember

- The first dose of the medication should be given at home unless the medication is a “school only” medication.

- Prior to administering medication, it is essential that the method used for giving the medication at home be known. This method should be followed in the school setting.

- Helps to ensure that the right medication is given to the right student.

- The person preparing the medication should be the person giving the medication.

    1 teaspoon = 5 milliliters (mls)

- By encouraging the student to assist in the procedure, the care giver is helping the student achieve maximum self-care skills.
## Procedure

### Oral Medications

9. Positioning for special situations:

**Small students at infant developmental level:**
- Hold student in the cradle position.
- Stabilize student’s head against your body.
- Hold student’s arm with your free arm.
- Press on student’s chin to open mouth.

**Large student at infant developmental level**
- Allow student to remain in wheelchair.
- Support student’s head against your body.
- Press on student’s chin to open mouth.

**Students with tongue thrust**
- Medications may need to be rescued from the student’s lips or chin and re-administered.

10. Administering medication:

**Dropper**
- Squirt medication to the back and side of the student’s mouth in small amounts.

**Syringe**
- Place syringe to the back and side of the student’s mouth.
- Give the medication slowly, allowing the student to swallow.

In smaller children, 3 to 4 squirts per 5 milliliters (ml) is recommended.

**Nipple**
- Pour medication into the nipple after it has been measured. Allow the student to suck the medication from the nipple. Follow the medication with a teaspoon of water.

**Medicine Cup**
- Place the medication in the cup. If the student is capable of drinking the medication without help, allow him/her to do so; if the student is unable to hold the cup, then hold the cup and allow the student to drink the medication.

**Tablets**
- If the student is able to swallow a tablet, place it on the middle of the tongue, then student can swallow tablet with juice or water.
- Tablets that may be chewed or crushed and placed in a fruit syrup or applesauce.
- Tablets may be crushed between 2 spoons.

### Points to Remember

When holding or supporting the student, it is important that the student is relaxed to prevent choking.

A relaxed position may be achieved by flexing the student’s neck, rounding the shoulders, and positioning the student in a slightly forward or flexed position.

It is important to check with pharmacist to see if drug action will be affected by crushing the medication.

Make sure that medication does not cling to
<table>
<thead>
<tr>
<th>Procedure</th>
<th>Points to Remember</th>
</tr>
</thead>
<tbody>
<tr>
<td>♦ Unscored tablets should not be divided. If medication authorization requires unscored tablet to be divided, please consult with pharmacist prior to dividing the medication.</td>
<td>spoon, so that student receives all of the prescribed medication. Division of unscored tablets may adversely affect their absorption by the body.</td>
</tr>
<tr>
<td>♦ Do not force a student to take a tablet if he/she resists because of the potential for aspiration.</td>
<td>Check with parents to determine how the medication is given at home.</td>
</tr>
<tr>
<td>Capsules</td>
<td>Many medications are designed to be time-released. It is important not to disrupt this formulation because it affects the absorption of the medication and may cause potential harm to the student.</td>
</tr>
<tr>
<td>♦ Place the capsule on the back of the tongue and have the student swallow lots of fluid.</td>
<td></td>
</tr>
<tr>
<td>♦ Some capsules may be opened and sprinkled on a spoonful of food. Check with pharmacist to see if this can be done.</td>
<td></td>
</tr>
<tr>
<td>11. Before student leaves your presence, make sure that he/she has received and swallowed all of the medication.</td>
<td>Students may hold medication in their mouth and spit it out at a later time.</td>
</tr>
<tr>
<td>Nose Drops</td>
<td>The lowered position is necessary when the student can not sniff the medication.</td>
</tr>
<tr>
<td>9. For young children/developmentally young children, cradle student in your arms, stabilizing head with arm, and tilt student’s head slightly back OR place student’s head over a pillow.</td>
<td></td>
</tr>
<tr>
<td>10. Squeeze prescribed drops into each nostril.</td>
<td></td>
</tr>
<tr>
<td>11. Older students may give their own medication, if they are able to sniff the medication.</td>
<td></td>
</tr>
<tr>
<td>Ear Drops</td>
<td>Keeps medication from flowing out of the ear.</td>
</tr>
<tr>
<td>9. Tilt student’s head away from affected ear. Pull pinna (outer edge of ear) upwards and back.</td>
<td></td>
</tr>
<tr>
<td>10. Instill ear drops as ordered into the student’s ear.</td>
<td></td>
</tr>
<tr>
<td>11. Student should maintain this position for 5 to 10 minutes. Then place a small piece of cotton ball into the ear canal.</td>
<td></td>
</tr>
<tr>
<td>Eye Drops or Ointment</td>
<td></td>
</tr>
<tr>
<td>9. Place student in a supine position (lying down on his/her back).</td>
<td></td>
</tr>
<tr>
<td>Procedure</td>
<td>Points to Remember</td>
</tr>
<tr>
<td>----------------------------------------</td>
<td>---------------------------------------------------------</td>
</tr>
<tr>
<td>10. Drops - Pull lower eyelid down and out to form a cup. Drop solution into the cup. Close eye gently and attempt to keep eye closed for a few moments.</td>
<td>Avoid touching dropper to eye to avoid contamination of the medication.</td>
</tr>
<tr>
<td>11. Ointment - Pull lower eyelid down, apply ointment along edge of lower eyelid from the nose side of the eyelid to the opposite side.</td>
<td>Avoid touching tip of medication container to the to eye to avoid contamination of the medication.</td>
</tr>
</tbody>
</table>

**Rectal Medications**

9. Place student in side-lying or prone position (on his/her stomach)

10. Lubricate suppository with water-soluble gel.

11. Using a finger cot, gently insert the suppository into the rectum.
   ♦ Do not insert finger more than 1/2 inch.
   ♦ Hold buttocks together for 5 to 10 minutes.

   It is important that privacy be provided.

   Prevents quick expulsion of the medication so that the medication has adequate time to be absorbed.

**Enzyme Replacement Therapy** (Used with students with cystic fibrosis to provide pancreatic enzymes.)

9. Enzymes should be given prior to a meal or snack.

   Pancreatic enzymes aid in digestion and absorption of food; therefore, they should be given prior to eating.

10. Microspheres or microtablets should not be crushed or chewed.

   Enzymes should dissolve in the higher pH environment of the intestines rather than the mouth. The enzymes are coated with an enteric coating that prevents the enzyme from being dissolved till it reaches the intestine. If the coating is disrupted by crushing or chewing, the enzyme will not dissolve in the proper place.

11. For infants and small children, the capsules should be broken open and mixed with a lower pH food, such as applesauce.

   Notify parents and/or physician of any problems or side effects.

12. Document medication given, time given, amount given, how it was given, who gave it, and the student’s name. Also, document any problems or side effects.
### Possible Problems

<table>
<thead>
<tr>
<th>Observations</th>
<th>Reason/Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incomplete dose of medication</td>
<td>If the student spits or vomits the medication, administer the medication again. Investigate why the student spit or vomited. Perhaps a smaller potion of medication may be given at more frequent times, or medication may be mixed with juice to make it more palatable.</td>
</tr>
<tr>
<td>Incorrect medication</td>
<td>Notify parents and physician immediately with name of medication and dosage given. Follow physician’s orders.</td>
</tr>
<tr>
<td>Medication not given</td>
<td>Report immediately to parents and/or physician. Determine when medication should be given next.</td>
</tr>
<tr>
<td>Choking</td>
<td>Stop giving medication immediately. When student begins to breathe regularly and has completely recovered, medication can be given. If the student does not recover and is believed to have an obstructed airway, perform the Heimlich Maneuver, activate the emergency medical system, and begin CPR as indicated.</td>
</tr>
<tr>
<td>Response to medication</td>
<td>Any side effects should be reported to the parents. If the student has an allergic reaction, the medication should be discontinued.</td>
</tr>
</tbody>
</table>
