**A** movement is underway sparked by IDEA 2004 to make classroom books accessible to students with disabilities. Textbook publishers are beginning to create accessible digital versions of their books, and many books are now available online. Have you prepared your plan to make your district's curriculum accessible?

Where do you begin? (See guide on left)

- 1 Acquire books in accessible formats
- 2 Provide the technology that makes your eBooks accessible

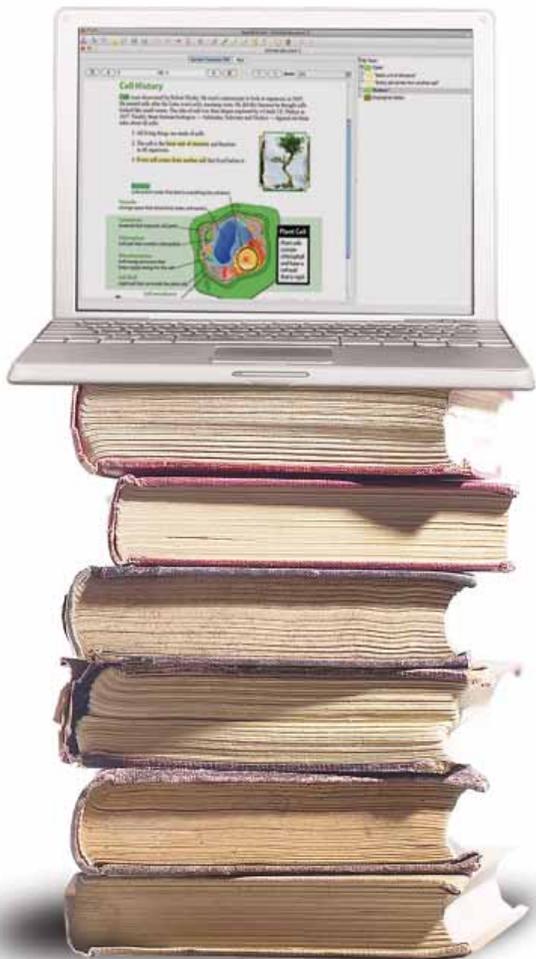

### Acquiring books in accessible formats

Several organizations (Bookshare, RFB&D, NIMAC) are responsible for providing materials to students who qualify under the copyright exemption (only 1-3% percent of students receiving special education services). But, IDEA also says that State Education Agencies are responsible for ensuring that children with disabilities who need accessible instructional materials receive them in a timely manner even if they DON'T qualify under the copyright exemption laws.

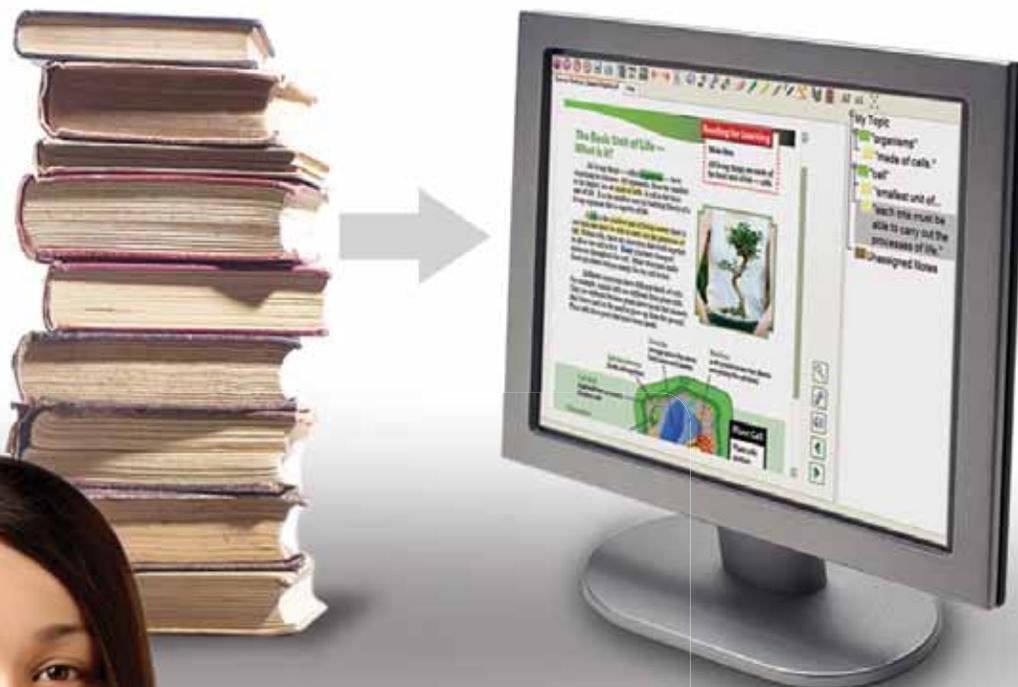

How many of your students could benefit from accessible book formats? The *best way* to acquire these materials is to **negotiate with your textbook publishers**. Talk with your curriculum committee to negotiate the purchase of those materials. We offer sample contract language on our website at [www.donjohnston.com/accesscurriculum](http://www.donjohnston.com/accesscurriculum). Instead of paying for a printed textbook for each student, offer to pay for printed textbooks and eBooks in accessible formats at the time of purchase or adoption of instructional materials.

### Provide the technology that makes your eBooks accessible

**Once you acquire books, you will need the right technology to read them.** The following pages will guide you through several options to make your files accessible.

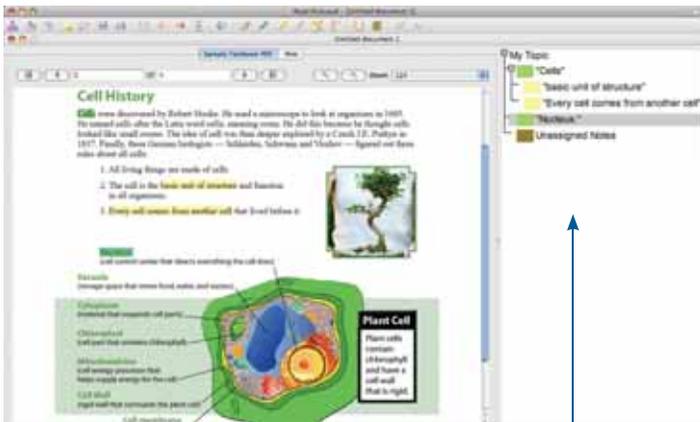

# TEXT READER — Whole-School Access to eBooks and to the Internet

*It was taking a while for others in my district to understand the responsibility we carry to make our curriculum accessible. There were a lot of initiatives, but an accessible curriculum just wasn't getting on the priority list. In fact, very few people were aware of the accessibility requirements in IDEA 2004. I got sick of seeing my students falling further behind in class because they couldn't read their textbooks, so I took action. I requested books in accessible formats from publishers, signed students up for Bookshare, and purchased an Unlimited Site License of Read:OutLoud for my district.*

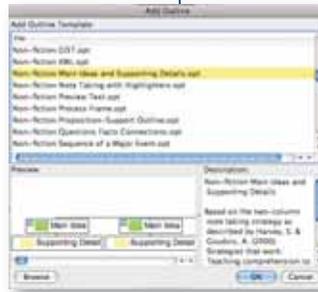

**Now, all of my students can access their books on any computer at school and even at home.**

# FILE CONVERSION AND OCR SCANNING TOOL — Turns Printed Text and Digital Text Files into Accessible eBooks

## Scan and Read

*Even after you obtain eBooks from your publishers, you will likely have some books or book files that are still not available in accessible formats. After you get permission from the publisher, there are ways to make the printed text accessible through OCR software using EasyConverter.*

## EasyConverter by Dolphin

EasyConverter is two products in one. It's an OCR scanning tool AND it also converts your inaccessible eBook files into accessible formats.

To utilize EasyConverter's OCR scanning capabilities, just connect a scanner, and you can easily convert printed textbook pages into accessible digital formats (with publisher permission).

EasyConverter is also a powerful file conversion tool. It's the only software tool available that quickly converts all of your digital text files (Kurzweil, Microsoft Word, PDF, and even images containing text) into accessible formats (DAISY/NIMAS, MP3, Braille, and Large Print).

Don't get stuck with one solution! If you have a collection of Kurzweil files, use the EasyConverter to convert them into standard file formats for maximum compatibility with other text readers like Read:OutLoud or devices like the ClassMate Reader. For your documents only available in paper format, scan them into EasyConverter by connecting your flatbed scanner. Then you can edit the scanned text with the document editor.

With EasyConverter, you're not only able to meet the widest range of student needs, but you will also comply with all the laws and regulations related to Accessible Instructional Materials!
