Math Mat Problem Solving – A Co-Teaching Lesson Plan

Co-Teaching Approaches
A “(Y)” in front of the following list items indicates the approach is outlined in the lesson. An “(N)” in front of the following list items indicates the approach is not outlined in the lesson.

- (Y) Parallel Teaching
- (Y) Team Teaching
- (N) Station Teaching
- (N) One Teach/One Observe
- (N) Alternative Teaching
- (N) One Teach/One Assist

Subject
Grade 4 Mathematics

Strand
Computation and Estimation

Topic
Problem solving with fractions and mixed numbers.

SOL
4.5 The student will
  c) solve single-step practical problems involving addition and subtraction with fractions and mixed numbers.

Outcomes
The student will be able to solve practical problems involving addition and subtraction with fractions and mixed numbers.

Materials
- Fraction Strips
- Problem-solving mat
- Chart paper

Vocabulary
common factors, common multiples, difference, estimation, factor, fraction, greatest common factor (GCF), improper fraction, least common denominator, least common multiple (LCM), like and unlike denominators, mixed number, simplify, simplest form,

<td>Team teaching</td>
</tr>
<tr>
<td></td>
<td>Begin by asking students to consider how they typically solve a problem in their everyday lives. Do they just do something without thinking, do they get suggestions and opinions from others, or do they look at their options? Discuss the importance of connecting the mathematics they are studying to real-life situations. Ask students what kind of questions they need to ask themselves when confronted with a mathematics problem. Ask what they think about when solving such problems. Lead them to realize that they should ask themselves: “What do I know? What do I want to know? What information given is important? What should I do to find the answer? Does the answer make sense?”</td>
<td>Introduce/reintroduce the problem-solving mat. Assist and guide the discussion by copying the attached problem-solving mat on a large chart paper.</td>
</tr>
<tr>
<td><strong>Lesson Activities/Procedures</strong></td>
<td>Present the following problem to students: A school wants to make a new playground by cleaning up an abandoned lot that is shaped like a rectangle. They give the job of planning the playground to a group of students. The students decide to use one-fourth of the playground for a basketball court and three-eighths of the playground for a soccer field. How much of the</td>
<td>Monitor and assist students as needed. Ask the “Why?” and “How do you know?” questions, listening for understanding and misconceptions. Select several students to share their thinking with the class (looking for different solution strategies). Monitor students who incorrectly and correctly solve the problem to group them for</td>

<tr>
<td></td>
<td></td>
<td>playground has been used? How much is left to be used? Have student pairs complete the problem-solving mat using the information given and solve the problem. Have several selected students share their solution strategies and thinking.</td>
</tr>
<tr>
<td>Guided/Independent Practice</td>
<td>Parallel Teaching</td>
<td>Marty made two types of cookies. He used two-thirds cup of sugar for one recipe and one-fourth cup of sugar for the other. How much sugar did he use in all? Direct students to complete problem-solving mat. Discuss the information written on the mat with a partner. Have student pairs solve the problem. Monitor students, asking the “Why?” and “How do you know?” questions, listening for understanding and different strategies for solving the problem. Select students to share their thinking and solution strategies. Be sure to make connections between the solution strategies. Repeat the process with the following problems: 1. Steven drank one-third of a gallon of milk in the morning, and one-sixth at dinner. How much milk did Steven drink?</td>

|                  |                          | drink in all? How much of the gallon is left?  
1.                |                          | 2. James walks one-half mile to the library, and Jane walks three-eighths of a mile to the same library. How much further does James walk?  
3. John took a hike. He completed one-half mile before lunch and three-fourths of a mile after lunch. How far did John hike altogether? If John’s goal is two miles, how much further does he have to go? | the M&Ms are red and blue?  
2. James walks one-half mile to the library, and Jane walks three-eighths of a mile to the same library. How much further does James walk? |
| Closure          | Parallel Teaching        | Select students to share their thinking. Ask questions to highlight different strategies. | Same as GE. |
| Formative        | Team Teaching            | Exit Ticket  
Observe students as they work.  
After class, use data to form groups. | Same as GE. |
| Assessment       |                          |                       |                       |
| Strategies       |                          |                       |                       |
| Homework         |                          | Optional: Students can create and solve an additional problem in their mathematics journals. |                       |

**Specially Designed Instruction**
- The vocabulary LINCing routine should be used with students as a specialized instruction/review device. While not used directly in this lesson, it could be used the next day to help struggling students develop a better understanding of content. A blank template is attached below.
- Accompany instruction with manipulatives, illustrations, and thinking aloud to help students understand difficult concepts and procedures.
- Provide scaffolded practice to students who need that extra support.
Accommodations

- Students use manipulatives.
- Students use number line and/or multiplication chart.
- Allow multiple ways for students to demonstrate understanding such as drawing, writing, or using manipulatives on the problem-solving mat.

Modifications

- For those students who require a modified curriculum, content could be modified to adding/subtracting whole numbers or fractions with the same denominators.

Notes

- This is an introductory lesson to problem solving with fractions. Mixed numbers should be introduced later in the unit using the same format.
- “Special educator” as noted in this lesson plan might be an EL teacher, speech pathologist, or other specialist co-teaching with a general educator.
- The co-teachers who developed this lesson plan received required professional development in the use specialized instruction techniques which combine an explicit instructional routine with the co-construction with the frame helps to develop understanding of information and procedures by associating main ideas and details. These content enhancement routines were developed at the Center for Research on Learning at the University of Kansas.
- Other graphic organizers should be used by teachers who have not received professional development in these routines. If Virginia teachers would like to learn content enhancement routines, contact your regional TTAC.

Note: The following pages are intended for classroom use for students as a visual aid to learning.
Exit Ticket

Jackie has $\frac{1}{3}$ of a Hershey bar. Steven has $\frac{4}{12}$ of a Hershey bar. How much do they have together?
Problem-Solving Mat

READ
What information do you know from the problem?

THINK
What is the question?
What information will help me decide which operation to use?
