Logic and Conditional Statements

**Strand:** Reasoning, Lines, and Transformations

**Topic:** Investigating symbolic form while working with conditional statements

**Primary SOL:** G.1 The student will use deductive reasoning to construct and judge the validity of a logical argument consisting of a set of premises and a conclusion. This will include
   a) identifying the converse, inverse, and contrapositive of a conditional statement; and
   b) translating a short verbal argument into symbolic form.

**Related SOL:** G.2a, G.6, G.7, G.8, G.9

**Materials**
- Vocabulary and Symbols activity sheet (attached)
- Vocabulary and Symbols (Teacher’s Reference) (attached)
- Logic and Conditional Statements, Part 1, activity sheet (attached)
- Logic and Conditional Statements (Teacher’s Reference) (attached)
- Logic and Conditional Statements, Part 2, activity sheet (attached)
- Flash cards (attached)
- Logic and Conditional Statements handout (attached)

**Vocabulary**
- biconditional, conclusion, conditional statement, conjecture, contrapositive, converse, disprove, hypothesis, inverse, logical argument, negate, negation, proof, prove, verify, Venn diagram

**Student/Teacher Actions: What should students be doing? What should teachers be doing?**
1. Distribute the Vocabulary and Symbols activity sheet, to review the basic vocabulary included in this activity.
2. Distribute the Logic and Conditional Statements, Part 1, activity sheet, and work through the examples with students.
3. Distribute the Logic and Conditional Statements, Part 2, activity sheet, and have students work in pairs or small groups to complete the problems.
4. Have students discuss findings with their partners.
5. Discuss findings as a whole group. Distribute the Logic and Conditional Statements handout, and review it with students. Have students use it for quick reference.
6. Use the Flash Cards and the Logic and Conditional Statements handout as a quick review and a check for understanding.
Assessment

- Questions
  - What is the inverse of the converse of $p \rightarrow q$? Use symbols $p, q, \rightarrow,$ and $\neg$ and mathematics vocabulary to answer this question.
  - What conclusion can you draw, using all of the following statements?
    \[
    \neg q \rightarrow s \quad t \rightarrow \neg r \quad q \rightarrow t \quad u \rightarrow \neg s
    \]

- Journal/Writing Prompts
  - Draw a Venn diagram of the two statements: “No reptiles have fur” and “All snakes are reptiles.” Then, draw a logical conclusion, if possible. (Note: While Venn diagrams are not a focus of this standard, they may be used as representations.)
  - Write a converse-inverse-contrapositive poem by writing an “if ..., then” statement followed by its converse, inverse, and contrapositive. Create additional stanzas using related “if ..., then” statements.
  - Read one of Laura Numeroff’s books, such as If You Give a Mouse a Cookie, to the class. Discuss it as an extended syllogism or logical chain, and have students write a story that is a logical chain of syllogisms.

- Other
  - Have students work in pairs to evaluate strategies.
  - Use activity sheets to help assess student understanding.

Extensions and Connections (for all students)

- Have students investigate Lewis Carroll’s logic puzzles.
- Have students solve the logic puzzle from J.K. Rowling’s Harry Potter and the Sorcerer’s Stone, 1998, p. 285.
- Invite a politician or political analyst to visit the class. Ask the guest speaker to explain the relationships among facts, trends, and educated guesses.
- Have students use presentation software to present vocabulary.

Strategies for Differentiation

- Some students may find the included “if ..., then” statements to be difficult. Provide alternate “if ..., then” statements for use on the Logic and Conditional Statements activity sheets:
  - a. If we win the game today, then we go to the state championship.
  - b. If it is the weekend, then we do not go to school.
  - c. A triangle has three sides.
  - d. Complementary angles measure 90°.
- Have students write their own conditional statement in “if ..., then” form. Take four slips of paper. Write “If” on one slip, “then” on another, the hypothesis on the third, and the conclusion on the fourth. Flip the hypothesis (top to bottom), and write the negation of the hypothesis on the back. Do the same for the conclusion. Use these slips to illustrate converse, inverse, and contrapositive. This can also be done as a whole-group activity,
with students holding the slips in front of the class. When introducing symbols, label the hypothesis, conclusion, and negation statements with $p$, $\sim p$, $q$, and $\sim q$.

- Use three slips of paper, as above, labeled with $p$, $\rightarrow$, and $q$ to illustrate the converse, inverse, and contrapositive of conditional statements using symbols. (Write $\sim p$ on the back of $p$ and $\sim q$ on the back of $q$, flipping from top to bottom.)

- Have students write an “if ..., then” statement of their choosing on an index card. Write the converse, inverse, and contrapositive on the back of the card. Check that all statements generated by students are correct. In the next class, use these cards to have students quiz each other in pairs, and then trade cards with another pairs of students.

- Have students use highlighters to mark the hypothesis and conclusion in conditional statements.

- Provide students with the reference sheets on colored paper. (Flash Cards and Conditional Statements)

**Note:** The following pages are intended for classroom use for students as a visual aid to learning.
Vocabulary and Symbols

Define each of the following vocabulary terms.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Conditional Statement</strong></td>
<td>A statement that can be written in “if ..., then” form.</td>
</tr>
<tr>
<td><strong>Hypothesis</strong></td>
<td>The part of a conditional statement that follows the word “if.”</td>
</tr>
<tr>
<td><strong>Conclusion</strong></td>
<td>The part of a conditional statement that follows the word “then.”</td>
</tr>
<tr>
<td><strong>Negation</strong></td>
<td>The opposite of a given statement formed by adding or removing the word “not” from the statement.</td>
</tr>
<tr>
<td><strong>Negate</strong></td>
<td>To add or remove the word “not” from a statement to change its truth value from true to false or from false to true.</td>
</tr>
<tr>
<td><strong>Converse</strong></td>
<td>A statement formed from a conditional statement by swapping the hypothesis and conclusion.</td>
</tr>
<tr>
<td><strong>Inverse</strong></td>
<td>A statement formed from a conditional statement by negating the hypothesis and conclusion.</td>
</tr>
<tr>
<td><strong>Contrapositive</strong></td>
<td>A statement formed from a conditional statement by swapping and negating the hypothesis and conclusion.</td>
</tr>
<tr>
<td><strong>Biconditional</strong></td>
<td>A statement that combines the converse and its inverse when they are both true. It uses the phrase “if and only if.”</td>
</tr>
</tbody>
</table>
Mathematics Instructional Plan – Geometry

Fill in the meaning of each of the following symbols.

<table>
<thead>
<tr>
<th>$p$, $q$, $r$, $s$, $t$, etc.</th>
<th>$\rightarrow$</th>
<th>$\lor$</th>
</tr>
</thead>
<tbody>
<tr>
<td>$\sim$</td>
<td>$\therefore$</td>
<td></td>
</tr>
<tr>
<td>$\land$</td>
<td>$\iff$</td>
<td></td>
</tr>
</tbody>
</table>
# Vocabulary and Symbols (Teacher’s Reference)

Define each of the following vocabulary terms.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conditional Statement</td>
<td>A statement that can be written in “if ..., then” form.</td>
</tr>
<tr>
<td>Hypothesis</td>
<td>The part of a conditional statement that follows the word “if.”</td>
</tr>
<tr>
<td>Conclusion</td>
<td>The part of a conditional statement that follows the word “then.”</td>
</tr>
<tr>
<td>Negation</td>
<td>The opposite of a given statement formed by adding or removing the word not from the statement.</td>
</tr>
<tr>
<td>Negate</td>
<td>To add or remove the word not from a statement to change its truth value from true to false or from false to true.</td>
</tr>
<tr>
<td>Converse</td>
<td>A statement formed from a conditional statement by switching the hypothesis and the conclusion.</td>
</tr>
<tr>
<td>Inverse</td>
<td>A statement formed from a conditional statement by negating the hypothesis and the conclusion.</td>
</tr>
<tr>
<td>Contrapositive</td>
<td>A statement formed from a conditional statement by switching AND negating the hypothesis and the conclusion.</td>
</tr>
<tr>
<td>Biconditional</td>
<td>A statement that combines the conditional and its converse when they are both true. It uses the phrase “if and only if.”</td>
</tr>
</tbody>
</table>

Fill in the meaning of each of the following symbols.

<table>
<thead>
<tr>
<th>p, q, r, s, t, etc.</th>
<th>Meaning: Symbols used to represent statements such as hypotheses and conclusions</th>
</tr>
</thead>
<tbody>
<tr>
<td>→</td>
<td>Meaning: if ..., then (implies)</td>
</tr>
<tr>
<td>✓</td>
<td>Meaning: or</td>
</tr>
<tr>
<td>~</td>
<td>Meaning: not</td>
</tr>
<tr>
<td>:</td>
<td>Meaning: therefore</td>
</tr>
<tr>
<td>∧</td>
<td>Meaning: and</td>
</tr>
<tr>
<td>⇔</td>
<td>Meaning: if and only if (IFF)</td>
</tr>
</tbody>
</table>
Logic and Conditional Statements, Part 1

Name ___________________________ Date ______________

Use the following conditional statement to complete 1-11: “If elephants fly, then fish don’t swim.” Each answer should be a complete sentence, not symbols.

1. \( p \) is the hypothesis. Write \( p \).
2. \( q \) is the conclusion. Write \( q \).
3. \( \neg p \) means “the negation of \( p \).” Write \( \neg p \).
4. \( \neg q \) means “the negation of \( q \).” Write \( \neg q \).
5. (Converse) \( q \rightarrow p \) means “\( q \) implies \( p \)” or “If \( q \), then \( p \).” Write \( q \rightarrow p \).
6. (inverse) \( \neg p \rightarrow \neg q \) means “Not \( p \) implies not \( q \)” or “If not \( p \), then not \( q \).” Write \( \neg p \rightarrow \neg q \).
7. (contrapositive) \( \neg q \rightarrow \neg p \) means “Not \( q \) implies not \( p \)” or “If not \( q \), then not \( p \).” Write \( \neg q \rightarrow \neg p \).
8. \( p \land q \) means “\( p \) and \( q \).” Write \( p \land q \).
9. \( p \lor q \) means “\( p \) or \( q \).” Write \( p \lor q \).
10. \( \therefore p \) means “therefore \( p \)” Write \( \therefore p \).
11. \( p \iff q \) means “\( p \) if and only if \( q \)” Write \( p \iff q \).

Use the following conditional statement to complete 1-8: “If I win, then you don’t lose.”

1. Write the hypothesis.
2. Write the conclusion.
3. Negate the hypothesis.
4. Negate the conclusion.
5. Write the converse.
6. Write the inverse.
7. Write the contrapositive.
8. Write the biconditional.
**Logic and Conditional Statements, Part 1 (Teacher’s Reference)**

Use the following conditional statement to answer 1-11: “If elephants fly, then fish don’t swim.” Each answer should be a complete sentence, not symbols.

1. \( p \) is the hypothesis. Write \( p \). **Elephants fly.**
2. \( q \) is the conclusion. Write \( q \). **Fish don’t swim.**
3. \( \neg p \) means “the negation of \( p \).” Write \( \neg p \). **Elephant don’t fly.**
4. \( \neg q \) means “the negation of \( q \).” Write \( \neg q \). **Fish swim.**
5. (converse) \( q \to p \) means “\( q \) implies \( p \)” or “If \( q \), then \( p \).” Write \( q \to p \). **If fish don’t swim, then elephants fly.**
6. (inverse) \( \neg p \to \neg q \) means “Not \( p \) implies not \( q \)” or “If not \( p \), then not \( q \).” Write \( \neg p \to \neg q \). **If elephants don’t fly, then fish swim.**
7. (contrapositive) \( \neg q \to \neg p \) means “Not \( q \) implies not \( p \)” or “If not \( q \), then not \( p \).” Write \( \neg q \to \neg p \). **If fish swim, then elephants don’t fly.**
8. \( p \land q \) means “\( p \) and \( q \).” Write \( p \land q \). **Elephants fly and fish don’t swim.**
9. \( p \lor q \) means “\( p \) or \( q \).” Write \( p \lor q \). **Elephants fly or fish don’t swim.**
10. \( \therefore p \) means “therefore \( p \).” Write \( \therefore p \). **Therefore, elephants fly.**
11. \( p \leftrightarrow q \) means “\( p \) if and only if \( q \).” Write \( p \leftrightarrow q \). **Elephants fly, if and only if fish don’t swim.**

Use the following conditional statement to answer 1-8: “If I win, then you don’t lose.”

1. Write the hypothesis. **I win.**
2. Write the conclusion. **I don’t lose.**
3. Negate the hypothesis. **I don’t win.**
4. Negate the conclusion. **I lose.**
5. Write the converse. **If I don’t lose, then I win.**
6. Write the inverse. **If I don’t win, then I lose.**
7. Write the contrapositive. **If I lose, then I don’t win.**
8. Write the biconditional. **I win, if and only if, I don’t lose.**
Logic and Conditional Statements, Part 2

Name ______________________ Date __________________

1. Write each of the following statements as a conditional statement. Then, circle the hypothesis, and underline the conclusion.
   
a. Mark Twain wrote, “If you tell the truth, you don’t have to remember anything.”

b. William Camden wrote, “The early bird catches the worm.”

c. Helen Keller wrote, “One can never consent to creep when one feels the impulse to soar.”

d. Mahatma Gandhi wrote, “Freedom is not worth having if it does not include the freedom to make mistakes.”

e. Benjamin Franklin wrote, “Early to bed and early to rise makes a man healthy, wealthy, and wise.”

2. Write the converse, inverse, and contrapositive for each of the following conditional statements. Determine whether each is true or false.
   
a. “If two segments are congruent, then they have the same length.”
      Converse: ________________________________
      Inverse: ________________________________
      Contrapositive: __________________________
      True or false: ___________________________
   
b. A rectangle has four sides.
      Converse: ________________________________
      Inverse: ________________________________
      Contrapositive: __________________________
      True or false: ___________________________
3. Write each of the following statements in symbolic notation:
   Let p represent: you see lightning
   Let q represent: you hear thunder
   
a. If you see lightning, then you hear thunder.
   
b. If you hear thunder, then you see lightning.
   
c. If you don’t see lightning, then you don’t hear thunder.
   
d. If you don’t hear thunder, then you don’t see lightning.

4. Write each of the following statements in symbolic notation:
   
   Let p represent: two planes intersect
   Let q represent: the intersection is a line
   
a. If two planes don’t intersect, then the intersection is a line.
   
b. If the intersection is not a line, then two planes do not intersect.

Logic and Conditional Statements

Conditional Statement

If \( p, \) then \( q \)

or \( p \) implies \( q \)

\( \sim p \) is read "not \( p \)"

and means the opposite of \( p \)

Converse \( q \rightarrow p \)

Inverse \( \sim p \rightarrow \sim q \)

Contrapositive \( \sim q \rightarrow \sim p \)

Always

Sometimes

Never
